2023~2024

ABOUT DIJET PRODUCT GUIDE

- All cutter-holders are supplied without Inserts , Wrench & MOLY.
- Specifications for the products listed in this catalog are subject to change without notice due to replacement or modification.

TYPE OF MACHINING

CORNER SHAPE

OTHERS

G-Body

G-BODY is a GN surface-hardening treatment on thermal resistant high strength steel giving a hardness over 65HRC and secures insert pocket and holder against thermal deformation improving body durability.

C-Body

Carbide shank provides much lower deflection than steel shank , that enables maximum tool life and highest productivity.

HIGH FEED TOOLS LINE-UP

HIGH STRENGTH INSERT WITH
SHARPNESS & STABILITY.
RELIABLE EVEN AT HIGH FEED RATE &
HIGH DEPTH OF CUT.
DEVELPOED FOR HIGH METAL ROMOVAL
MACHINING.

ap≦3mm

SKS SERIES

Rigidity

SKS SERIES

SKS EXTREME EXSKS 09 Type

- 6 cutting edges
- High metal romoval
- Max.ap = 3mm
- Machine type: BT50
- Program R : R3.5

SKS EXTREME EXSKS 07 Type

- 6 cutting edges
- Exellent balance of stability &sharpness
- Max.ap = 2mm
- Machine type: BT50
- Program R : R3.0

SKS GII SKG/MSG Type

- 4 cutting edges
- For High feed & HighD.O.C. machining
- Max.ap = 1.5-2.5mm
- Machine type: BT40-50
- Program R : R2.0-R4.0

SKS EXTREME EXSKS 05 Type

- 6 cutting edges
- For High feed machining with multi-flutes
- Max.ap = 1.5mm
- Machine type: BT40-50
- Program R : R2.5

ADVANCED 3-D SHAPED CUTTING EDGE INSERT WITH LOW CUTTING FORCE GEOMETRY . MULTI-FLUTES SPEC. HOLDER . DEVELPOED FOR HIGH SPEED MACHINING EVEN ON SMALL SIZED MACHINE.

ap ≦ 1mm

QM SERIES

Low cutting force

QM SERIES

QM MAX GII GMX/MXG Type

- 4 cutting edges
- Machining wide variety of materials
- Max.ap = 1.0mm
- Machine type: BT40-50
- Program R : R1.5

QM MAX QXP/MQX Type

- 2 cutting edges
- Multiple insert choices for wide range of applications
- Max.ap = 1.0mm
- Machine type: BT40-50
- Program R : R1.5

QM MILL MPM/PME Type

- 2 cutting edges
- For roughing to finishing
- low cutting force
- Max.ap = 0.4mm
- Machine type: BT30-40
- Program R : R1.0

SHOULDER MILLING TOOLS LINE-UP

■ Shoulder Milling Series

SIC-EVO
QM MILL (ZOMT06 insert)
QM MAX (ZPMT10 insert)

- Single-sided 2 cutting edge insert
- Excellent chips control design
- Reliable even for long overhang machining

SHOUDER EXTREME
EXSAP-11 type
EXSAP-17 type

- Double-sided 4 cutting edge insert
- G class ground insert gives good surface finish on bottom & side wall

SHOULDER 6
EXSIX type

- Double-sided 6 cutting edge insert
- High cutting edge strength
- For heavy roughing process

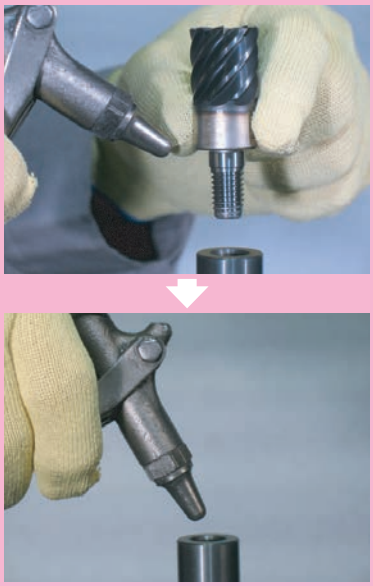
Modular Head Series

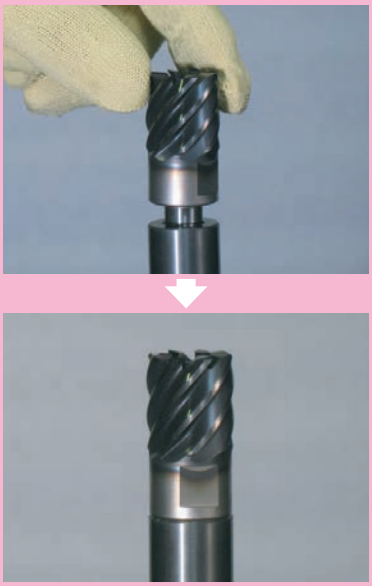
■ PROPER MOUNTING OF MODULAR HEADS

1 Cleaning



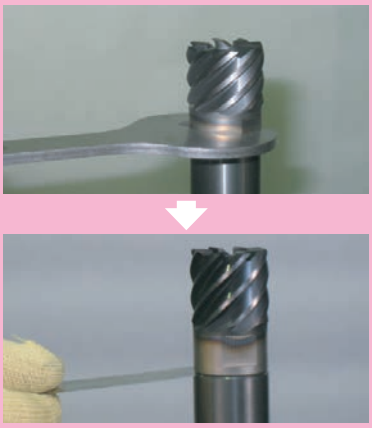
Remove dirt and chips with air from the connecting thread andface of modular head and MSN/MGN shank holder.

2 Initial Tightening



Tighten by hand until the head and the shank holder faces touch.

3 Final Tightening



Tighten slowly with torque control spanner wrench or DIJET DS type spanner wrench and confrm that there is no gap.

Attention) 1. Final tightening without initial tightening cause connecting thread damage.
2. Only use DS type spanner wrench when use Solid modular head (SMSA/SMSR/SMAL type)

Attention

1. Only use torque control spanner wrench or DIJET DS type spanner wrench.
   In case of choosing torque control spanner wrench, confrm that the wrench size is matched to the dimensions W & C of each modular head.

Torque control spanner

Spanner wrench (DS type)

2. Only apply gentle pressure on wrench.

3. Confirm there is no gap between MSN/MGN shank holder and modular head

■ **Steel modular heads**

Thread	Tightening torque	Spanner size(W)
M6	8.0N·m	8☆,10
M8	16N·m	12☆
M10	16N·m	14, 15
M12	20N·m	17, 19
M16	25N·m	22, 26

■ **Solid modular heads(SMSA/SMSR/SMAL)**

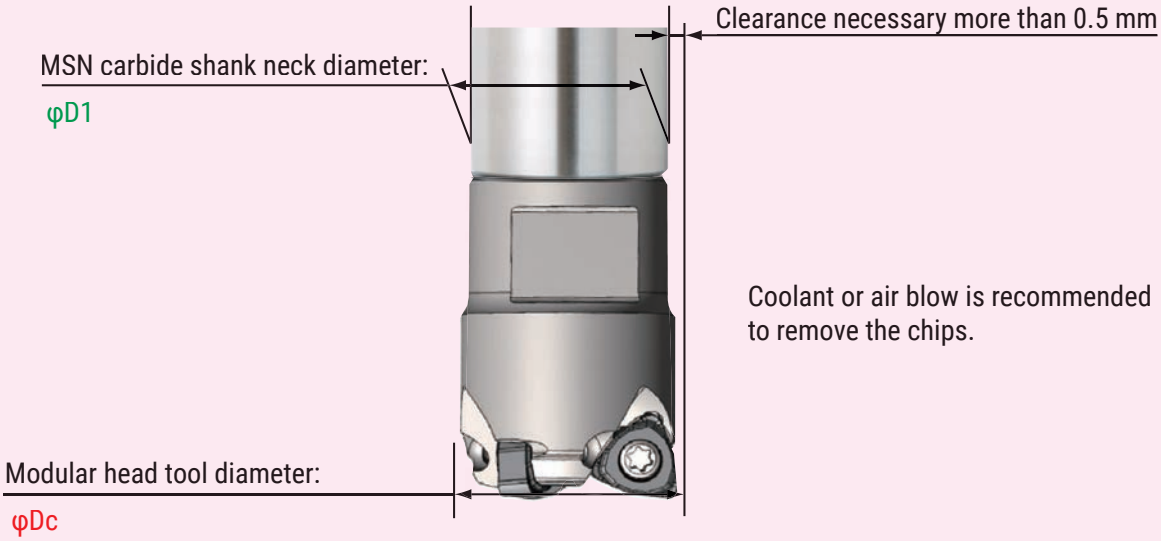
Thread	Tightening torque	Spanner size(W)	Cat.No.
M8	10～11N·m	14	DS-14
M10	10～11N·m	14	DS-14
M10	10～16N·m	17	DS-17
M12	15～20N·m	19, 22	DS-19, DS-22
M16	20～25N·m	27	DS-27

Note) Modular heads are supplied without spanner wrench

Modular Head Series

■ SELECTION OF MSN CARBIDE SHANK HOLDER

When using modular head over Ø 16mm, please select MSN carbide shank which the diameter (Ø D1) is 1 mm or smaller than modular head (Ø Dc).
Wrong selection can cause damage to the carbide shank.



⚠ Caution for mounting in shrink fit holder.

When you use a carbide shank and a modular head on a shrink fit holder, please shrink fit only the carbide shank without mounting the modular head. Mount the modular head on the shank after shrink fit operation is complete.
In case of shrink fit MSN shank + modular head together, it will be difficult to loosen due to heat

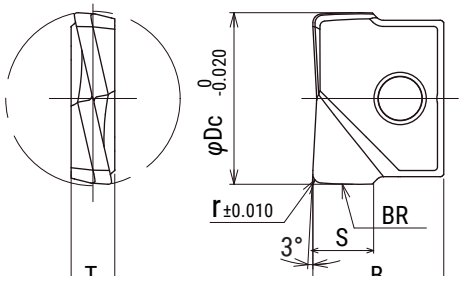
5-AXIS Series

Advanced machining technology that enables high-precision and high efficiency

A line-up that supports machining of complex sharpes found in the Die&Mould and Aerospace industries.

5-AXIS Series

KRM TYPE Insert for "MIRROR BARREL" KRM type



Radius form accuracy on the outer periphery ±0.010mm

Corner radius accuracy of inserts within ±0.010mm

MQT TYPE High precison "QM MAX" MQT type

- 3 different angled bodies (0°, 3°, and 5°) that cover a range of tapered walls from 0° ~ 8°
- Possible to use even on 3 axis machine with 3°or 5°angled body ; A03 type or A05 type
- High tolerance insert-pocket for the ground inserts
- High efficiency with multi flutes

Note
1. Figures to be adjusted according to machine rigidity or work rigidity.
2. If chattering occurs, recomennded to reduce ap and ae.
3. Use air blow.

SKS-GII

SKG/MSG Type

SKS-GII

SKG/MSG Type

Features 3 Flat top insert

SKG-10 type insert : Max ap=1.5mm

SKG-14 type insert : Max ap=2.5mm

Features 4 Chip breaker insert

Optimized cutting edge for machining of difficult to cut materials like titanium alloy.

Effective for machining that requires reduced cutting loads or long overhang application.

SM breaker for difficult to cut materials

PM breaker for mould steel

Features 5

Insert grades for a wide range of materials

<JC8118><JC8050><JC7550><DS150>

mould steel, hardned steel from 38HRC upto 50HRC

JC8118

mould steel, general steel below 36HRC

JC8050

Titanium alloy, stainless steel

JC7550、DS150

Note
1. Please adjust cutting conditions according to machine rigidity or work rigidity. (the above table is guide for cutting on a #50 BT machine.)
2. In case of chatter ocurring, recommended to reduce ap or rpm and keep feed per tooth.
3. ap should be reduced when using on low rigidity machine.
4. Use air blow.

★: ap≦1.0 when using SPMT10/SPET10 insert.

Note
1. Please adjust cutting conditions according to machine rigidity or work rigidity. (the above table is guide for cutting on a #50 BT machine.)
2. In case of chatter ocurring, recommended to reduce ap or rpm and keep feed per tooth.
3. ap should be reduced when using on low rigidity machine.
4. Use air blow.

★: ap≦1.0 when using SPMT10/SPET10 insert.

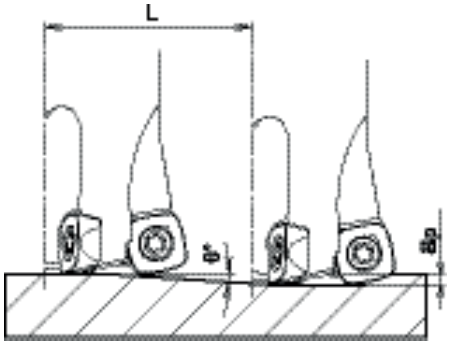
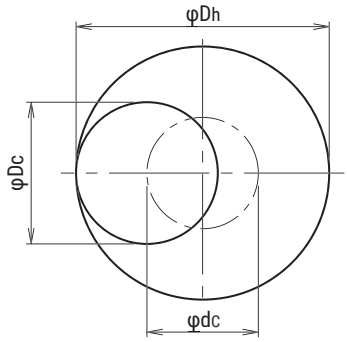
2.5	0.65	0.08			

■ Recommended Data for Profile Milling

Ramping



Helical interpolation



● Calculation of tool pass dia.

$$\varphi dc = \varphi Dh - \varphi Dc$$

Tool pass dia. Bore dia. Tool dia.

● Depth of cut per one circuit should not exceed max. depth of cut Ap

● Down cutting is recommended, tool pass rotation should be counterclockwise

● In case of ramping and helical interpolation, apply 70% or less feed (Vf) from standard cutting condition table

Note
1. Please adjust cutting conditions according to machine rigidity or work rigidity. (the above table is guide for cutting on a #50 BT machine.)
2. In case of chatter ocurring, recommended to reduce ap or rpm and keep feed per tooth.
3. ap should be reduced when using on low rigidity machine.
4. Use air blow.
5. Wet cutting is recommended for machining super duplex , titanium alloy and heat resistant alloy.

Note
1. Please adjust cutting conditions according to machine rigidity or work rigidity. (the above table is guide for cutting on a #50 BT machine.)
2. In case of chatter ocurring, recommended to reduce ap or rpm and keep feed per tooth.
3. ap should be reduced when using on low rigidity machine.
4. Use air blow.
5. Wet cutting is recommended for machining super duplex , titanium alloy and heat resistant alloy.

SKS EXTREME

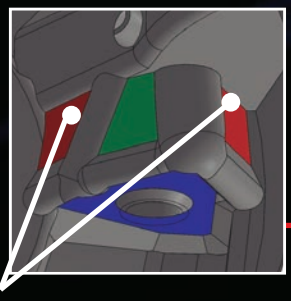
High-feed milling tools with double side inserts which achieve ultimate high-feed machining

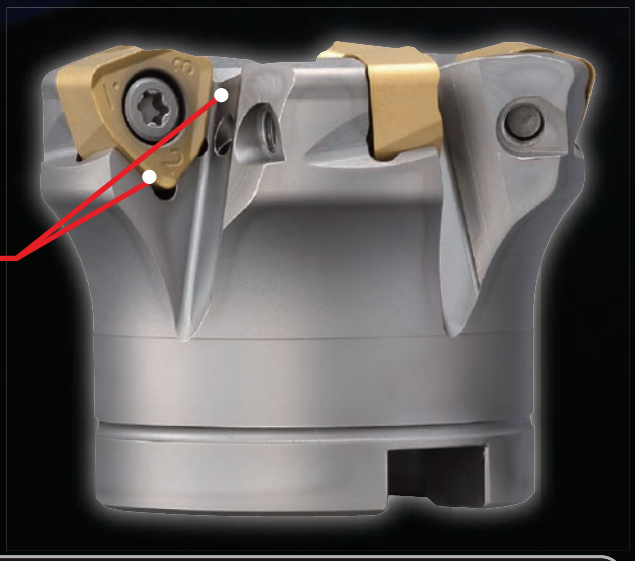
Feature 1

Economical double-side insert (with 6 cutting edges)

Feature 2

Due to dovetail-shaped binding face, movement of inserts which occur by cutting force is prevented only single screw clamping





Feature 3

Application

ISO	P					M					K				H		
	P01	P10	P20	P30	P40	M01	M10	M20	M30	M40	K01	K10	K20	K30	H01	H10	H20
Applicable range			JC8050					JC8050									
		JC8118										JC8118				JC8118	
				JC7560						JC7560							

Adopted 3 insert grades:

PVD coated grade "JC7560" improved fracture toughness & heat impact resistance.

PVD coated grade "JC8118" achieved longer tool life for mold steel,high hardened die steel less than 50HRC & cast iron.

PVD coated grade "JC8050", that adopted carbide substrate with improved fracture toughness & coating layer can be widely applied for carbon steel, mold steel, & stainless steel.

EXSKS-05 type

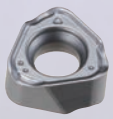
By adopting multi blade specification
with small diameter,
high-feed machining is possible.

M3 size screw for firm clamping of inserts

MaxAp=1.5mm

W=4.8

WNMU050320ZER-PM



grade : JC8050
JC8118

Optimal breaker for mold steel &
High hardened steel less than 50HRC

Coner radius for programming	Remains	Over cut
R2	0.59	0
R2.5	0.5	0
R3	0.41	0.13

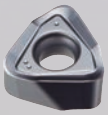
EXSKS-07type

Adopted specifications which
achieved both insert strength
and sharpness.
Stable high-feed machining is possible.

MaxAp=2mm

W=8.1

WNMU070620ZER-PM



grade : JC8050
JC8118

Optimal breaker for mold steel &
High hardened steel less than 50HRC

Coner radius for programming	Remains	Over cut
R3	0.80	0
R3.5	0.73	0.06
R4	0.66	0.21

EXSKS-09type

Lined up holders of big diameter.
High-feed machining with bigger depth of cut
is possible by adopting high-rigid inserts with
larger thickness.

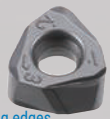
PM insert PL insert

MaxAp=3mm (2mm)

W=8.2

WNMU090828ZER-PL

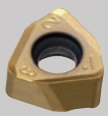
grade: JC8050 / JC8118



Suitable for machining shapes such as pocket milling
with ap = 0.6 mm to ap = 1.2 mm.
The composite shape of the straight and radius cutting edges
reduces fluctuations in cutting resistance during corner machining,
realizing stable machining and extending tool life.

WNMU090720ZER-PM

grade : JC8050/JC8118/JC7560



Suitable for face milling of ap=1.4mm or more and
shape machining such as pocket machining.

Coner radius for programming	Remains	Over cut
R3	1.41	0
R3.5	1.3	0
R4	1.19	0.025

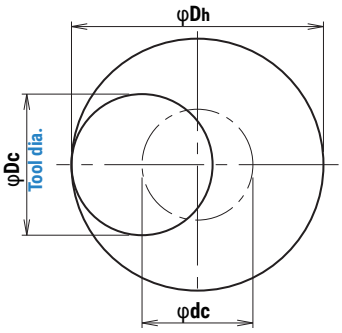
Helical interpolation



● **Calculation of tool pass dia.**

$$\varphi dc = \varphi Dh - \varphi Dc$$

Tool pass dia. **Bore dia.** **Tool dia.**

● Depth of cut per one circuit should not exceed max. depth of cut ap.

● Down cutting is recommended, so tool pass rotation should be counterclockwise.

● To obtain a flat bottom surface when helical milling, it requires to remove "the uncut part" in the center of the work material at a final pass.

◎ In case of ramping and helical interpolation, apply 70% or less feed speed from standard cutting condition table.
◎ In case of drilling,apply 50% or less Z axis feed speed from standard cutting condition table.
◎ Long consecutive chips may come out in case of drilling, confirm the safe condition suffciently.

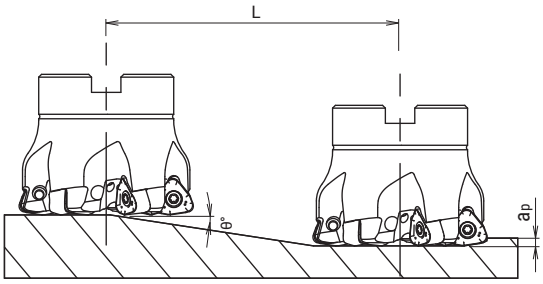
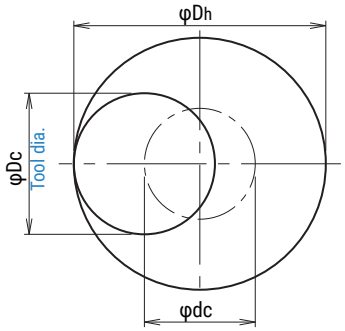
Attention for profile milling

Ramping



Helical interpolation



● **Calculation of tool pass dia.**

$$\varphi dc = \varphi Dh - \varphi Dc$$

Tool pass dia. **Bore dia.** **Tool dia.**

- Depth of cut per one circuit should not exceed max. depth of cut ap.
- Down cutting is recommended, so tool pass rotation should be counterclockwise.
- To obtain a flat bottom surface when helical milling, it requires to remove "the uncut part" in the center of the work material at a final pass.

◎ In case of ramping and helical interpolation, apply 70% or less feed speed from standard cutting condition table.
◎ In case of drilling,apply 50% or less Z axis feed speed from standard cutting condition table.
◎ Long consecutive chips may come out in case of drilling, confirm the safe condition suffciently.

Note
1. Please adjust cutting conditions according to machine rigidity or work rigidity. (the above table is guide for cutting on a #50 BT machine.)
2. In case of chatter ocurring, recommended to reduce ap or rpm and keep feed per tooth.
3. ap should be reduced when using on low rigidity machine.
4. Use air blow.

Note
1. Please adjust cutting conditions according to machine rigidity or work rigidity. (the above table is guide for cutting on a #50 BT machine.)
2. In case of chatter ocurring, recommended to reduce ap or rpm and keep feed per tooth.
3. ap should be reduced when using on low rigidity machine.
4. Use air blow.
5. ap≦2mm when using PL insert.

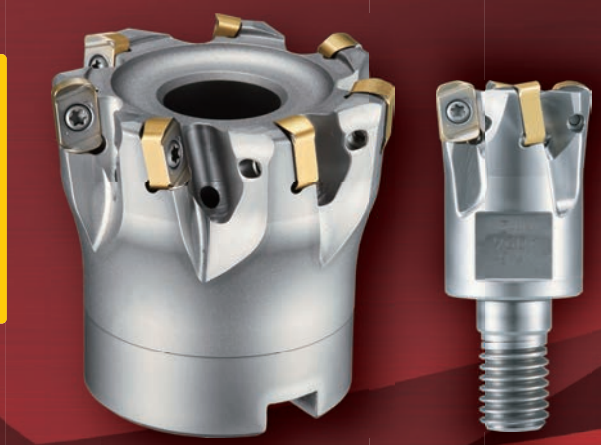
QM MAX GII — GMX/MXG Type

Achieving high metal removal rates!
High efficiency machining for versatile applications



Feature 1

Optimized cutting edge for a wide range of applications

ENMU Type
For high feed with chipbreaker

ENMQ Type
For hard materials

Feature 2

Economical double sided insert with 4 cutting edges
For various types of materials ; Carbon steel, Hardened material <upto 62HRC>, Stainless steel, Titanium alloy

Line up

Low cutting force → Edge strength

ENMU100412ZER-SL
- Low cutting force
- Sharp cutting edge
- Grade C7550, JC7518 DS118, DS150

ENMU100412ZER-PH
- For general applications
- Grade JC8118, JC8050, JC7560

ENMU100312ZER-HL
- For hardened materials up to 60HRC
- enhanced cutting edge strength but retains sharpness
- Grade DH102

ENMQ100312ZER
- Flat top insert
- Grade DH102
- For hardened materials over 60HRC

QM MAX GII — GMX/MXG Type

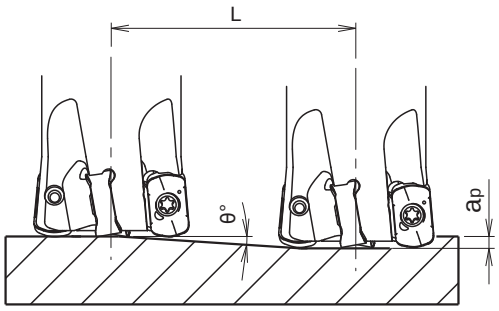
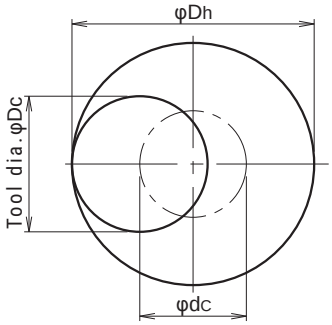
■ Recommended Data for Profile Milling

Ramping



Helical interpolation



● Calculation of tool pass dia.

$$\varphi dc = \varphi Dh - \varphi Dc$$

Tool pass dia. — Bore dia. — Tool dia.

● Depth of cut per one circuit should not exceed max. depth of cut Ap

● Down cutting is recommended, tool pass rotation should be counterclockwise

● In case of ramping and helical interpolation, apply 70% or less feed (Vf) from standard cutting condition table

● In case of drilling, apply 50% or less Z axis feed (F) from standard cutting condition table

● Long consecutive chips may result in case of drilling, confirm safe operating conditions

Cat.No.	Tool dia.	Effective Cutting dia.		Max. depth of cut: ap	Ramping

Note

1. Please adjust cutting conditions according to machine rigidity or work rigidity.
2. In case of chatter ocurring, recommended to reduce ap or rpm and keep feed per tooth.
3. ap should be reduced when using on low rigidity machine.
4. Use air blow.

Note
1. Please adjust cutting conditions according to machine rigidity or work rigidity.
2. In case of chatter ocurring, recommended to reduce ap or rpm and keep feed per tooth.
3. ap should be reduced when using on low rigidity machine.
4. Use air blow.

Note
1. Please adjust cutting conditions according to machine rigidity or work rigidity.
2. In case of chatter ocurring, recommended to reduce ap or rpm and keep feed per tooth.
3. ap should be reduced when using on low rigidity machine.
4. Use air blow.

QM MAX — MQX/QXP Type

QM Quick & Mini MAX

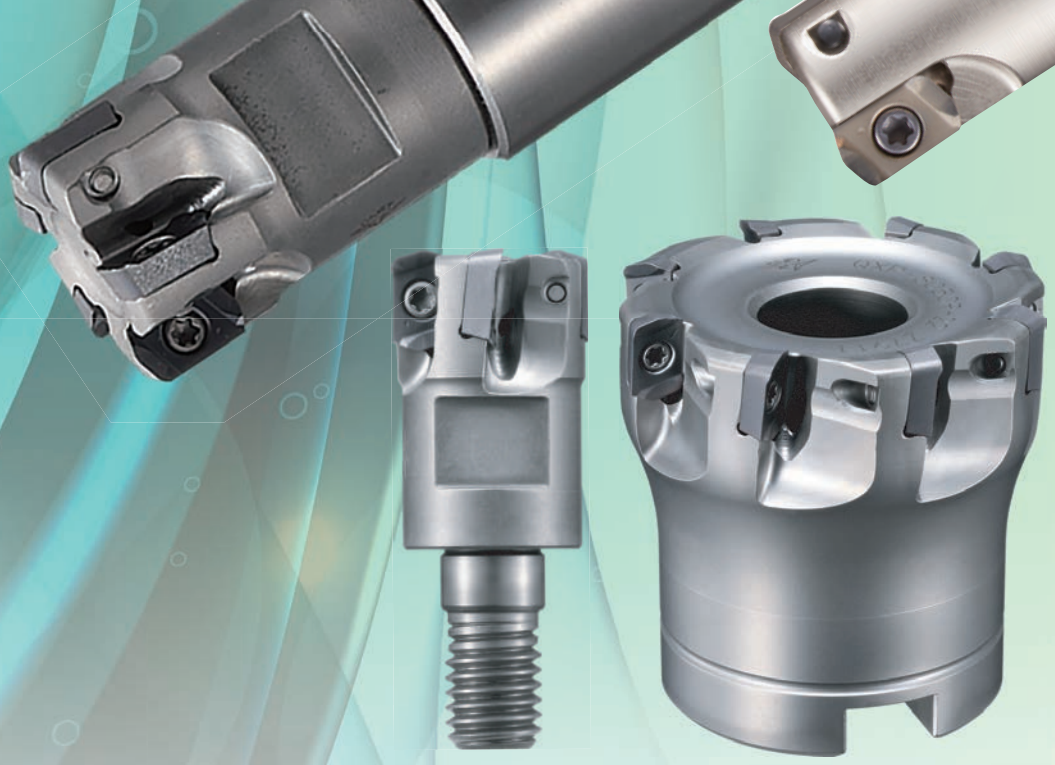
New generation high feed mill "QM MAX"

Modular Head
φ16～φ42

Facemill
φ40～φ66

G-Body

Endmill
φ16～φ40



Low cutting force geometry

Unique 3D geometry insert provides stable cutting and less power consumption.

Multi - flutes specification

High speed and high efficient machining.

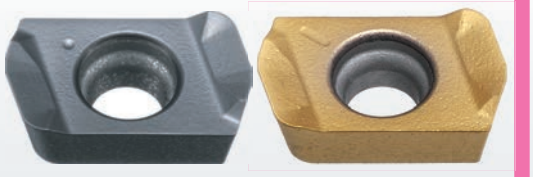
Vibration free

Control vibration with combination of MSN carbide shank holder

QM MAX MQX/QXP Type

Insert Line-Up

High feed insert



EPMT100312ZER EPMT100312ZER

High feed insert for unfavorable conditions

EPMW100312ZER EPMW100312ZTR EPMW100312ZTR

For high hardened steel

EPHW100316ZTR

Shoulder insert for aluminum

ZPMT1003...ZER-NL
(R0.4, 0.8, 2.0)

Shoulder insert for general steel

ZPMT1003...ZER-PL
(R0.4, 0.8, 2.0)

Shoulder insert for Ti alloy

ZPMT1003...ZER-SL
(R0.4, 0.8, 2.0)

"Mirror Insert" for finishing side & bottom face

YPHW1003...ZER-...

CBN insert

YPHW100308ZTR-F1

A variety of inserts all fit into the same body.
Multi-purpose cutter that can high feed, square up and finish.

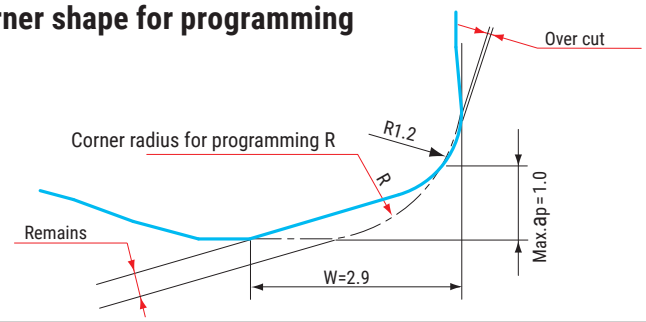
◎: First choice
○: For general milling
●: For unstable milling
☆: For light cutting force
×: Not recommended

■ Definition of corner shape for programming

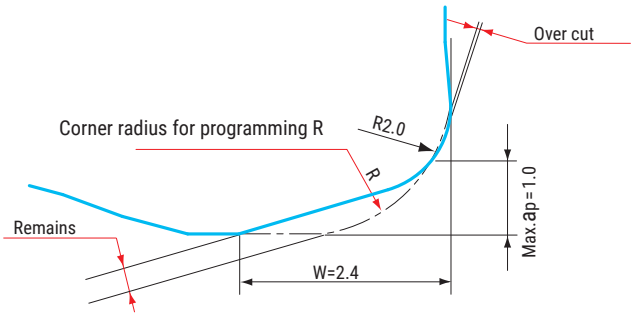
• EPMT/W Type
(RE＝R1.2)



(mm)

Corner radius for programming R	Over cut	Remains
R1.0	0	0.57
R1.5 (Std.)	0	0.45
R2.0	0.04	0.33
R2.5	0.21	0.21
R3.0	0.40	0.09

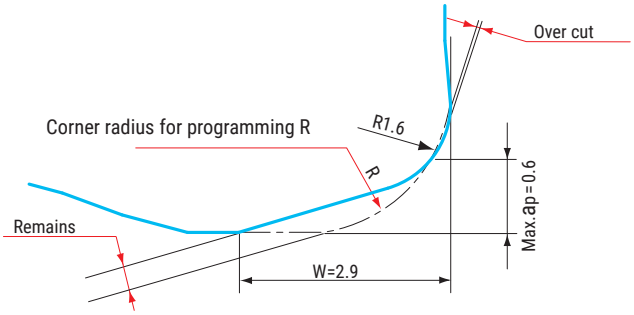
• EPMT Type
(RE＝R2.0)



(mm)

Corner radius for programming R	Over cut	Remains
R1.0	0	0.51
R1.5	0	0.31
R2.0 (Std.)	0	0.13
R2.5	0.12	0.04
R3.0	0.32	0

• EPHW Type



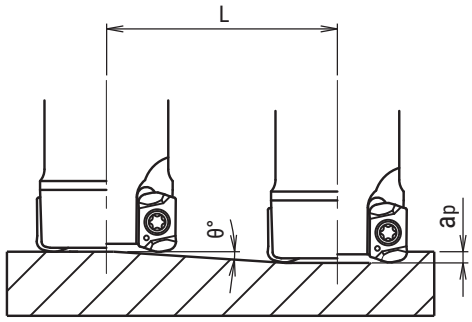
(mm)

Corner radius for programming R	Over cut	Remains
R1.0	0	0.42
R1.5 (Std.)	0	0.33
R2.0	0.01	0.23
R2.5	0.17	0.14
R3.0	0.37	0.05

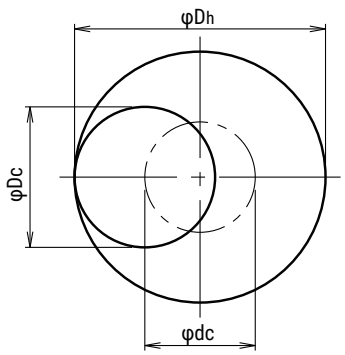
QM MAX MQX/QXP Type

■ Recommended Data for Profile Milling

Ramping



Helical interpolation



- Calculation of tool pass dia.

$$\varphi dc = \varphi Dh - \varphi Dc$$

Tool pass dia. Bore dia. Tool Dia.

- Depth of cut per one circuit should not exceed max. depth of cut Ap
- Down cutting is recommended, tool pass rotation should be counterclockwise

- In case of ramping and helical interpolation, apply 70% or less feed (Vf) from standard cutting condition table
- In case of drilling, apply 50% or less Z axis feed (F) from standard cutting condition table
- Long consecutive chips may result in case of drilling, confirm safe operating conditions

Note

1. Please adjust cutting conditions according to machine rigidity or work rigidity.
2. In case of chatter ocurring, recommended to reduce ap or rpm and keep feed per tooth.
3. ap should be reduced when using on low rigidity machine.
4. Use air blow.
5. When using ZPMT100320ZER-PL insert for High feed milling, reduce cutting conditions above by 10-30%.
6. When using Endmill type, reduce cutting conditions above by 10-20%.

Note
1. Please adjust cutting conditions according to machine rigidity or work rigidity.
2. In case of chatter ocurring, recommended to reduce ap or rpm and keep feed per tooth.
3. ap should be reduced when using on low rigidity machine.
4. Use air blow.
5. When using ZPMT100320ZER-PL insert for High feed milling, reduce cutting conditions above by 10-30%.
6. When using Endmill type, reduce cutting conditions above by 10-20%.

Note
1. Please adjust cutting conditions according to machine rigidity or work rigidity.
2. In case of chatter ocurring, recommended to reduce ap or rpm and keep feed per tooth.
3. ap should be reduced when using on low rigidity machine.
4. Use air blow.
5. When using ZPMT100320ZER-PL insert for High feed milling, reduce cutting conditions by 10-30%.

Note
1. Please adjust cutting conditions according to machine rigidity or work rigidity.
2. In case of chatter ocurring, recommended to reduce ap or rpm and keep feed per tooth.
3. ap should be reduced when using on low rigidity machine.
4. Use air blow.
5. Please scan QR code below for cutting conditions when using ZPMT-PL/NL/SL for side & bottom finishing.

Note
1. Please adjust cutting conditions according to machine rigidity or work rigidity.
2. In case of chatter ocurring, recommended to reduce ap or rpm and keep feed per tooth.
3. ap should be reduced when using on low rigidity machine.
4. Use air blow.

Note
1. Please adjust cutting conditions according to machine rigidity or work rigidity.
2. In case of chatter ocurring, recommended to reduce ap or rpm and keep feed per tooth.
3. ap should be reduced when using on low rigidity machine.
4. Use air blow.

Note
1. Please adjust cutting conditions according to machine rigidity or work rigidity.
2. In case of chatter ocurring, recommended to reduce ap or rpm and keep feed per tooth.
3. ap should be reduced when using on low rigidity machine.
4. Use air blow.

Note
1. Please adjust cutting conditions according to machine rigidity or work rigidity.
2. In case of chatter ocurring, recommended to reduce ap or rpm and keep feed per tooth.
3. ap should be reduced when using on low rigidity machine.
4. Use air blow.
5. YPHW-F insert with lower feed is recommended for better surface finish in case chatter occurs.
   Please scan QR code for cutting conditions of YPHW-F /-24 for bottom finishing.

2. In case of chatter ocurring, recommended to reduce ap or rpm and keep feed per tooth.
3. ap should be reduced when using on low rigidity machine.
4. Use air blow.
5. YPHW-F insert with lower feed is recommended for better surface finish in case chatter occurs.
   Please scan QR code for cutting conditions of YPHW-F /-24 for bottom finishing.

QM MILL — MPM/PME Type

Low cutting force geometry

- Unique 3D geometry insert provides stable cutting and less power consumption.
- BT30 Capable of running on low horse power & compact machines.

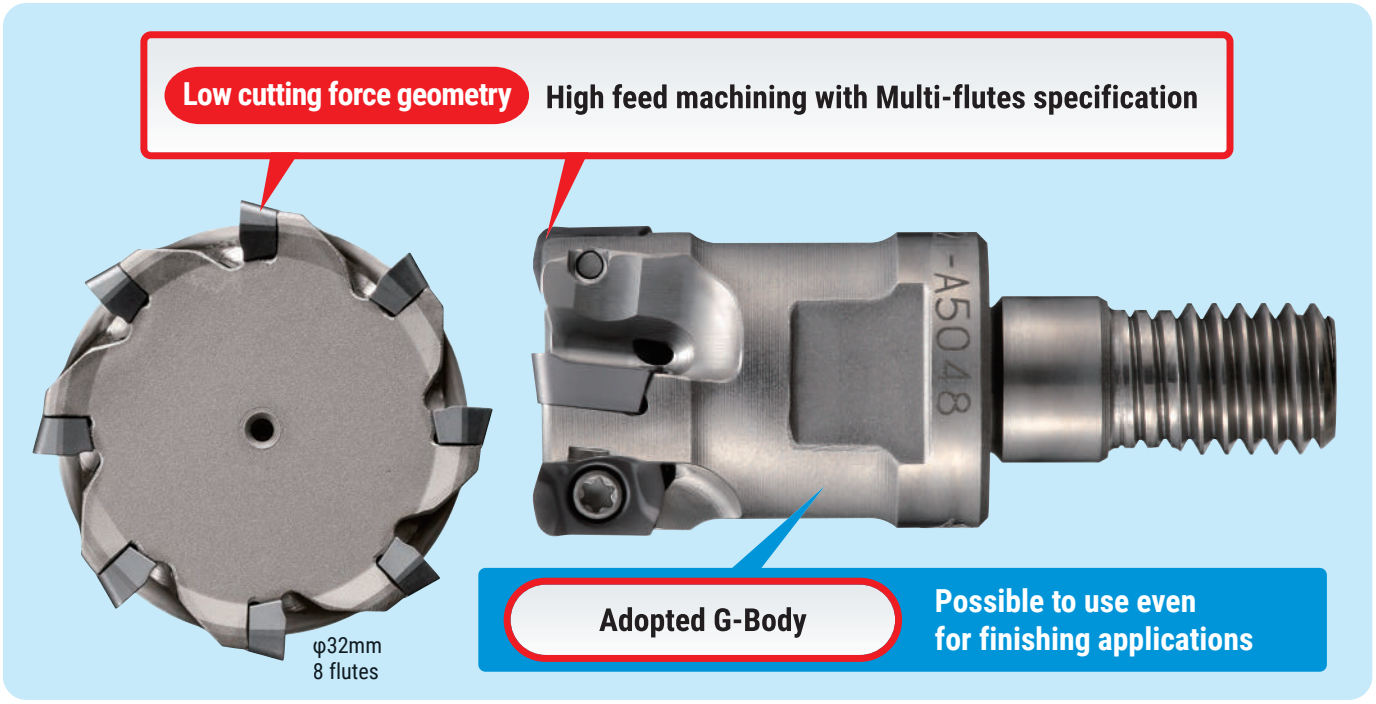
G-Body

Multi - flutes specification

High speed and high efficient machining.

Vibration free

Control vibration with combination of MSN carbide shank holder for longer tool life.



Insert Line-Up

A variety of inserts all fit into the same body.

High feed insert

EOMT0602...ZER (R1.0, 2.0)

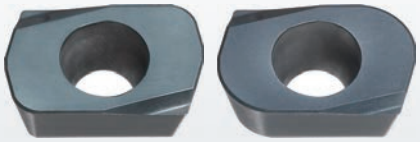
High feed insert for unfavorable conditions

EOMW060210ZER

Shoulder insert

ZOMT0602...ZER-PL (R0.2,0.4,0.8)

For high hardened steel



EOHW0602...ZTR (R1.0, 2.0)

"Mirror Insert" for finishing side & bottom face

YOHW0602...ZER-12

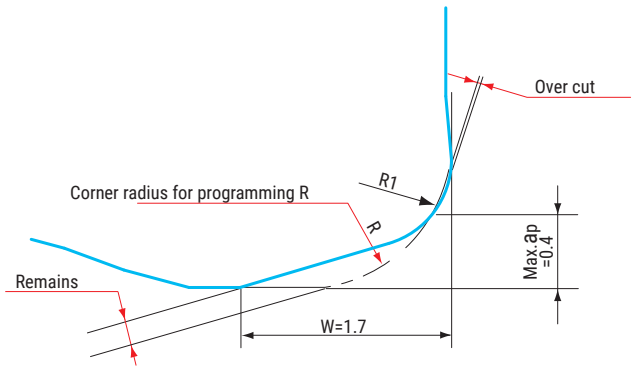
■ Definition of corner shape for programming

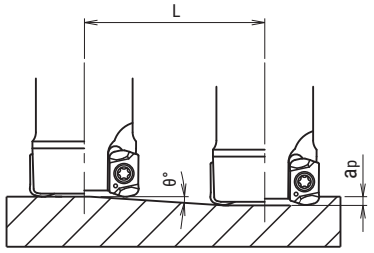


(mm)

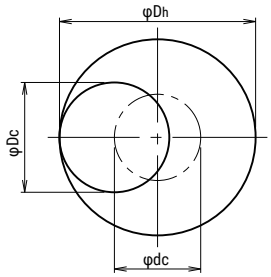
Corner radius for programming R	Over cut	Remains
R1.0 (Std.)	0	0.17
R1.5	0.09	0.08
R2.0	0.30	0

■ Recommended Data for Profile Milling

● Ramping



● Helical interpolation



● Calculation of tool pass dia.

$$\varphi dc = \varphi Dh - \varphi Dc$$

Tool pass dia. Bore dia. Tool Dia.

● Depth of cut per one circuit should not exceed max. depth of cut Ap

● Down cutting is recommended, tool pass rotation should be counterclockwise

● In case of ramping and helical interpolation, apply 70% or less feed (Vf) from standard cutting condition table

● In case of drilling, apply 50% or less Z axis feed (F) from standard cutting condition table

● Long consecutive chips may result in case of drilling, confirm safe operating conditions

Note
1. Please adjust cutting conditions according to machine rigidity or work rigidity.
2. In case of chatter ocurring, recommended to reduce ap or rpm and keep feed per tooth.
3. ap should be reduced when using on low rigidity machine.
4. Use air blow.
5. Please scan QR code for cutting conditions of ZOMT insert for side finishing or bottom finishing.

Note
1. Please adjust cutting conditions according to machine rigidity or work rigidity.
2. In case of chatter ocurring, recommended to reduce ap or rpm and keep feed per tooth.
3. ap should be reduced when using on low rigidity machine.
4. Use air blow.

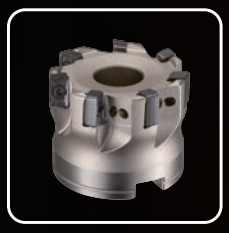
EXTREME SAP
EXSAP/MSX TYPE



Facemill type

Modular head type

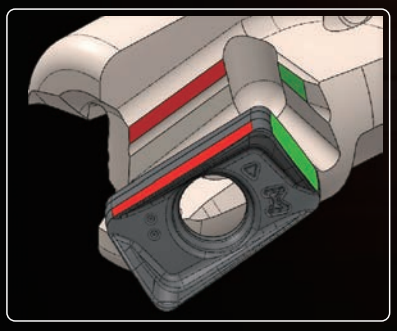
Endmill type

Various line up

Capable of a variety of applications
such as facemilling , slotting and plunging

Arc-shaped cutting edge trajectory

Due to the arc-geometry on peripheral cutting edge, cusp height can be smaller even in case of large ap.
Achieves high efficient & high precision machining for side walls.

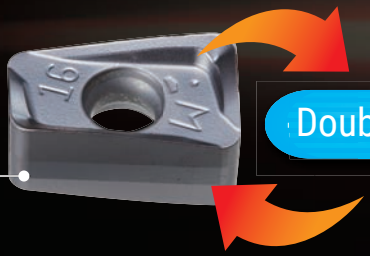


Strong clamping system

Due to unique clamping system that holds insert in place, it is possible to acheive high efficient machining in roughing application.

High precision G class periphery ground

capable of semi-finishing



Double sided 4 cutting edge insert

EXTREME SAP — EXSAP/MSX Type

EXSAP-11 type

High speed machining
with multi flutes & small insert

Accuracy of tool diameter : 0-0.1mm
Achieves higher precision on semi-finishing process

Grade: JC8050
JC8118

PM breaker for general steel (up to 50HRC)

Grade: JC7550
JC7518
DS118
DS150

SL breaker for hard to cut material
such as Titanium alloy, Heat resistant alloy

EXSAP-17 type

Max.depth of cut (ap)=15mm
From roghing to semi-finishing

High rigidity insert
Achieves high precision machining even when using large ap

Grade: JC8050
JC8118

PM breaker for general steel (up to 50HRC)

- In case of ramping and helical interpolation, apply 80% or less feed (Vf) from standard cutting condition table
- In case of helical interpolation, recommend wet cutting by coolant through the tool

- Calculation of tool pass dia.

$$\varphi dc = \varphi Dh - \varphi Dc$$

Tool pass dia. Bore dia. Tool Dia.

- Depth of cut per one circuit should not exceed max. depth of cut Ap
- Down cutting is recommended, tool pass rotation should be counterclockwise

Note
1. Please adjust cutting conditions according to machine rigidity or work rigidity.
2. In case of chatter ocurring, recommended to reduce ap or rpm and keep feed per tooth.
3. ap should be reduced when using on low rigidity machine.
4. Use air blow.
5. In case of slotting , apply 50% or less feed (Vf) from standard cutting condition table.

Note
1. Please adjust cutting conditions according to machine rigidity or work rigidity.
2. In case of chatter ocurring, recommended to reduce ap or rpm and keep feed per tooth.
3. ap should be reduced when using on low rigidity machine.
4. Use air blow.
5. In case of slotting , apply 50% or less feed (Vf) from standard cutting condition table.

Note
1. Please adjust cutting conditions according to machine rigidity or work rigidity.
2. In case of chatter ocurring, recommended to reduce ap or rpm and keep feed per tooth.
3. ap should be reduced when using on low rigidity machine.
4. Use air blow.

Note
1. Please adjust cutting conditions according to machine rigidity or work rigidity.
2. In case of chatter ocurring, recommended to reduce ap or rpm and keep feed per tooth.
3. ap should be reduced when using on low rigidity machine.
4. Use air blow.
5. In case of slotting , apply 50% or less feed (Vf) from standard cutting condition table.

Note
1. Please adjust cutting conditions according to machine rigidity or work rigidity.
2. In case of chatter ocurring, recommended to reduce ap or rpm and keep feed per tooth.
3. ap should be reduced when using on low rigidity machine.
4. Use air blow.
5. In case of slotting , apply 50% or less feed (Vf) from standard cutting condition table.

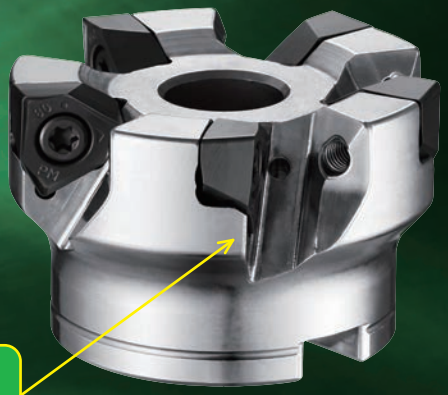
SHOULDER SIX — EXSIX Type

Double sided insert with 6 cutting edge

SHOULDER SIX

Unique 3D insert

Due to arch-geometry on the peripheral cutting edge, cusp height can be smaller even in case of large ap.



Achieves low cutting force

Achieves high efficient & high precision machining for side walls.

Features

This tool can accommodate an array of applications such as face milling, slotting and plunging. The unique 3D design of the insert has 6 positive axial cutting edges which decreases tool pressure.

Double - sided insert with 6 cutting edge.
The robust insert is 7.5mm in thickness allowing for stable machining and longer tool life.

Note
1. Please adjust cutting conditions according to machine rigidity or work rigidity.
2. In case of chatter ocurring, recommended to reduce ap or rpm and keep feed per tooth.
3. ap should be reduced when using on low rigidity machine.
4. Use air blow.
5. In case of slot milling , apply 50% or less feed (Vf) from standard cutting condition table.
6. Ramping and helical interpolation are not recommended.

SIC-EVO SSV Type

進化した。SIC-EVO

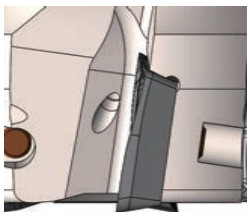
Capable of ramping & helical interpolation

Feature 1

Max. depth of cut (ap) =15mm is possible.
Usable for a wide range of applications such as face milling, slotting, pocket milling & side milling.

Arc geometry on peripheral cutting edge

Cusp height can be smaller even in case of large ap.
achieves high efficient & high precision machining for vertical walls.



High positive geometry with low cutting force

Feature 2

Available corner radius: R0.4, R0.8, R1.6, R2.0 & R3.0

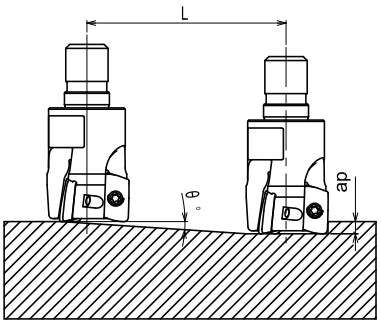
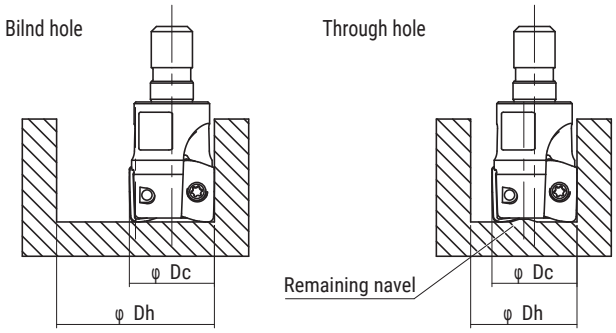
Recommended Data for Profile Milling

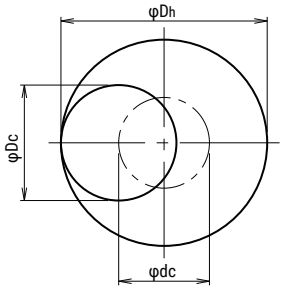
Ramping



Helical interpolation



- In case of ramping and helical interpolation, apply 80% or less feed (Vf) from standard cutting condition table
- In case of drilling , apply 50% or less feed (Vf) from standard cutting condition table
- In case of helical interpolation, recommend wet cutting by coolant through the tool
- Long chips may come out in case of drilling, confirm safe operating conditions



- Calculation of tool pass dia.

$$\varphi dc = \varphi Dh - \varphi Dc$$

Tool pass dia. Bore dia. Tool Dia.

- Depth of cut per one circuit should not exceed max. depth of cut Ap
- Down cutting is recommended, tool pass rotation should be counterclockwise

Note
1. Please adjust cutting conditions according to machine rigidity or work rigidity.
2. In case of chatter ocurring, recommended to reduce ap or rpm and keep feed per tooth.
3. ap should be reduced when using on low rigidity machine.
4. Use air blow.

Note
1. Please adjust cutting conditions according to machine rigidity or work rigidity.
2. In case of chatter ocurring, recommended to reduce ap or rpm and keep feed per tooth.
3. ap should be reduced when using on low rigidity machine.
4. Use air blow.

Ferritic & martensitic stainless steel (SUS403, 420J2, 430) 13Cr	JC8118	60	~10.0	~15	2,290	1,050	70	~12.0	~24	1,910	1,320
		100	~7.0	~10	2,040	730	120	~9.0	~18	1,700	920

Note
1. Please adjust cutting conditions according to machine rigidity or work rigidity.
2. In case of chatter ocurring, recommended to reduce ap or rpm and keep feed per tooth.
3. ap should be reduced when using on low rigidity machine.
4. Use air blow.

Note
1. Please adjust cutting conditions according to machine rigidity or work rigidity.
2. In case of chatter ocurring, recommended to reduce ap or rpm and keep feed per tooth.
3. ap should be reduced when using on low rigidity machine.
4. Use air blow.

		210	~1.5	~21	1,000	450	210	~1.5	~24	880	530

Note
1. Please adjust cutting conditions according to machine rigidity or work rigidity.
2. In case of chatter ocurring, recommended to reduce ap or rpm and keep feed per tooth.
3. ap should be reduced when using on low rigidity machine.
4. Use air blow.
In case of slot milling , apply 50% or less feed (Vf) from standard cutting condition table.

★ Insert mounting information

1. Make sure the insert seat on body is carefully cleaned.
2. Make sure insert itself is clean, especially hole and face location.
3. Change insert screw when threads start to wear. (approximately every 10-15 inserts)
4. Do not over tighten screw, see table for torque specifications.

ap adjustment by corner radius ap × ratio	Corner Radius		
		R0.5	ap×0.65
		R1	ap×0.80
		R1.5	ap×1.0
	Reduce ap according to above table with keeping Vf		

Note

1. Please adjust cutting conditions according to machine rigidity or work rigidity.
2. In case of chatter ocurring, recommended to reduce ap or Vf.
3. Recommended to reduce the parameteres when using on low horse power machine.
4. Use air blow.
5. Reduce ap, n & Vf by 30% in case of cutting material 50-55HRC.
6. Reduce Vf for better surface finish.
7. Use angle 2°30'or below in case of ramping (see right figure).
8. In case of slotting with over 5xDc, reduce Vf or ap appropriately.

★ Insert Mounting Information

1. Make sure the insert seat on body is carefully cleaned.
2. Make sure insert itself is clean, especially the hole and face location.
3. Change insert screw when threads starts to wear.
4. Do not over tighten screw. See table for torque specifications.

DIEMASTER 5G

High efficient and Multi purpose machining tool for Die and Mold.

FEATURE 1

- Different grade of insert for machining different kind of materials.
- This tool can make all kind of operations, from semi-finishing to finishing, in any kind of mold.

FEATURE 2

- Economical double-side insert (with 6 cutting edges)
- High accuracy (adopted H-class insert)
- JC8015 for general & mold steel
- DH103 for hardened die steel

ISO	P					M					K				H

Applicable range	DH103	JC8015				JC8015					DH103	JC8015			DH103		

FEATURE 3

- **Many kinds of modular heads are available withcombination of carbide shanks.**

- **Through coolant holes in all bodies give longer tool life and safe operations in cavities.**

● Attention

⚠ Attention to mounting head and MSN/ MGN shank arbor.

■ Tightening procedure

❶ Cleaning
Remove dirt and chips with air from the connecting thread and face of modular head and MSN/MGN shank arbor .

❷ Initial Tightening
Tighten by hand until the head and the shank arbor faces touch.

❸ Final Tightening
Tighten slowly with torque control spanner wrench or DIJET DS type spanner wrench and confirm that there is no gap.

Attention: Final tightening without initial tightening cause connecting thread damage.

⚠ NOTE

Note: 1. Please gently apply pressure on wrench.
2. Please confirm that there is no gap between MSN/MGN shank arbor and modular

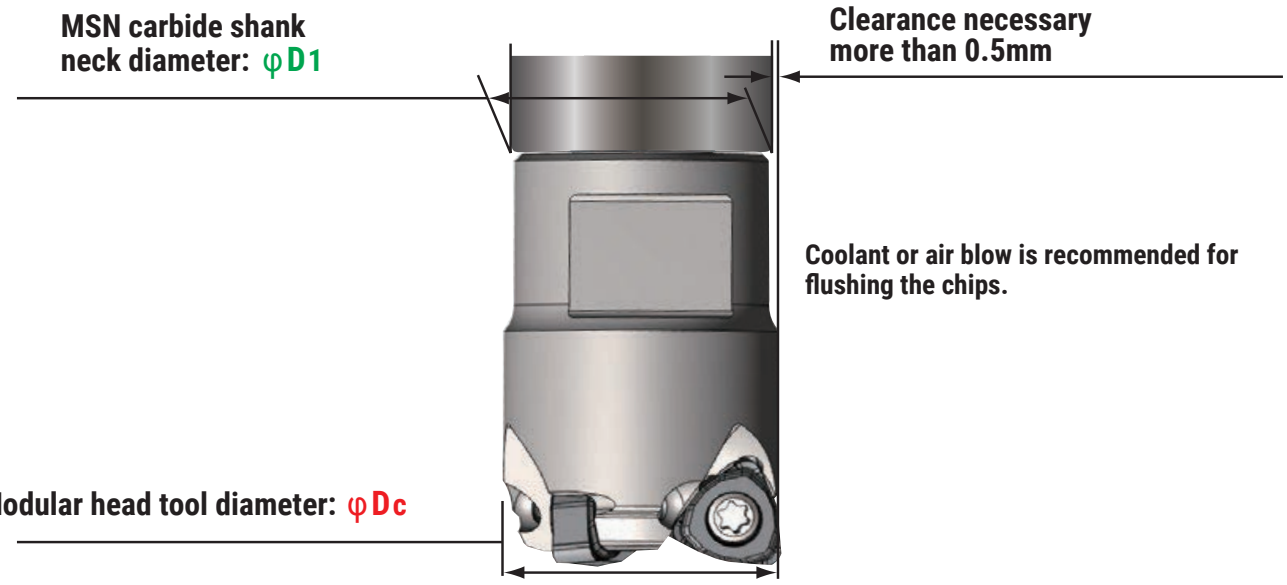
Thread	Tightening torque	Spanner size W (mm)
M8	16N・m	12☆
M10	16N・m	14, 15
M12	20N・m	17, 19
M16	25N・m	22, 26

Note: 1. Modular heads are supplied without spanner wrench.
2. In case of choosing torque control spanner wrench, confirm that the wrench size is match to the dimensions W & C of each modular head. (There are some cases that modifying the thickness of spanner wrench is necessary)
3. ☆ mark shows: DIJET have a stock of DS-8 and 12 type spanner wrenches.

⚠ Selection of "MSN Carbide shank arbor"

In case of using modular head over φ16mm, please select MSN carbide shank arbor that diameter (φD1) is 1mm or more smaller than modular head (φDc).
A wrong selection causes damage to the carbide shank.

$$\varphi Dc - \varphi D1 \geqq 1mm$$



⚠ Caution for the mounting to shrink fit holder.

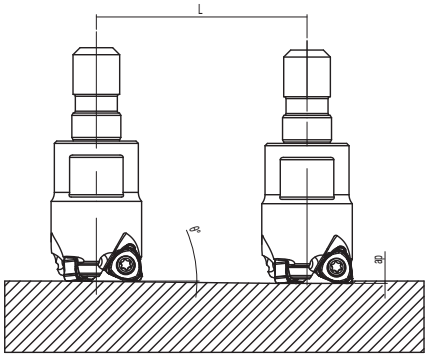
When you use a carbide shank and a modular head on the shrink fit holder, please shrink fit the only the carbide shank without modular head. Please mount a modular head after cooling off.

Note: In case of shrink fit MSN shank + modular head together, it will be difficult to loose due to heat desipation.

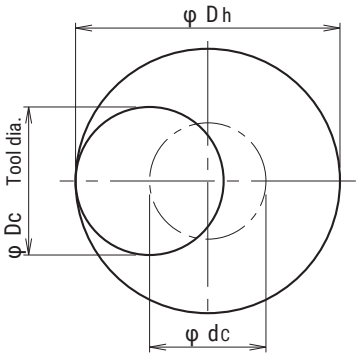
DIEMASTER 5G MXF/XFG Type

Attention for profile milling

Ramping



Helical interpolation



◎ In case of ramping and helical interpolation, apply 80% or less feed speed from standard cutting condition table.

◎ In case of helical interpolation, recommend wet cutting by coolant through the tool.

● **Calculation of tool pass dia.**

$$\varphi dc = \varphi Dh - \varphi Dc$$

Tool pass dia. Bore dia. Tool dia.

- Depth of cut per one circuit should not exceed max. depth of cut ap
- Down cutting is recommended, so tool pass rotation should be counterclockwise.
- To obtain a flat bottom surface when helical milling, it requires to remove "the uncut part" in the center of work materials at final pass.

Cat. No.	Tool dia. (mm)	Max. depth of cut (mm)	Ramping		Helical interpolation		
			Max. ramping angle θ°	Total cutting length at Max. ap	Through hole Min. bore dia. Dh min (mm)	Through hole Max. bore dia. Dh max (mm)	Flat bottom Max. bore dia. Dh min (mm)

Note
1. Please adjust cutting conditions according to machine rigidity or work rigidity.
2. The above cutting conditions are for a overhung length of 3Dc.
   Adjust the rotation speed n (min-1) and feed rate Vf (mm/min) according to the protrusion length
3. If chattering occurs, reduce the depth of cut to a shallower depth than the above values or lower the feed rate.
4. Remove chips by air blow. Be especially careful when machining cavities with a vertical MC.
5. When using a steel shank, reduce the rotation speed n (min-1) and feed rate Vf (mm/min) to 80% of the above conditions.

Note
1. The above cutting conditions should be adjusted according to the machine rigidity and workpiece rigidity.
2. If chattering occurs, reduce the depth of cut to a shallower depth than the above values or lower the feed rate.
3. Remove chips by air blow. Be especially careful when machining cavities with a vertical MC.
4. When using a steel shank, reduce the rotation speed n (min-1) and feed rate Vf (mm/min) to 80% of the above conditions.

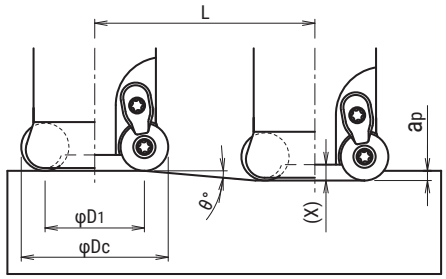
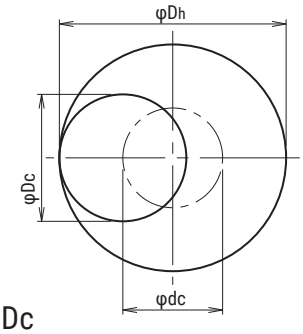
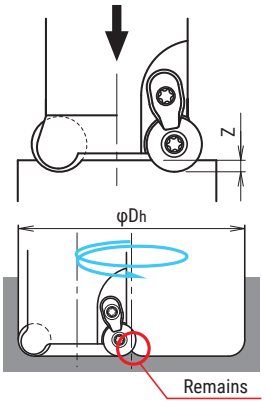
■ Recommended Data for Profile Milling

● Ramping



● Helical interpolation





● Calculation of tool pass dia. $\varphi dc = \varphi Dh - \varphi Dc$

Tool pass dia. Bore dia. Tool dia.

● Depth of cut per one circuit should not exceed max. depth of cut Ap.
● Down cutting is recommended, tool pass rotation should be counterclockwise
● Do not combine drilling and ramping together

● In case of ramping and helical interpolation, apply 70% or less feed (Vf) from standard cutting condition table.
● In case of drilling , apply 50% or less feed (Vf) from standard cutting condition table.
● Long chips may come out in case of drilling, confirm safe operating conditions.

		160	1.2	7,000	4,900	160	1.2	5,800	4,300

Note
1. Please adjust cutting conditions according to machine rigidity or work rigidity.
2. In case of chatter ocurring, recommended to reduce ap or Vf.
3. ap should be reduced when using on low rigidity machine.
4. Use air blow.
5. In case of cutting hard materials (50-55HRC) , reduce ap , n, Vf by 30% from standard conditions table.
6. Wet cutting is recommended when machining Titanium , Inconel.

		210	2	3,200	3,200	210	1.5	3,000	3,700

Note
1. Please adjust cutting conditions according to machine rigidity or work rigidity.
2. In case of chatter ocurring, recommended to reduce ap or Vf.
3. ap should be reduced when using on low rigidity machine.
4. Use air blow.
5. In case of cutting hard materials (50-55HRC) , reduce ap , n, Vf by 30% from standard conditions table.
6. Wet cutting is recommended when machining Titanium , Inconel.

HEPTA MILL — HEP Type

■ HEPTA MILL- High Feed Mill with 7 Cutting-Edge

G-Body

- Max. Depth of cut 5mm at fz=1mm/tooth is possible.
- Insert with thickness 6.35mm is durable for heavy roughing.
- Heptagonal insert with unique geometry for lower cutting force.
- Double clamping system
- Multi functional cutter for ramping , pocket milling , plunging.

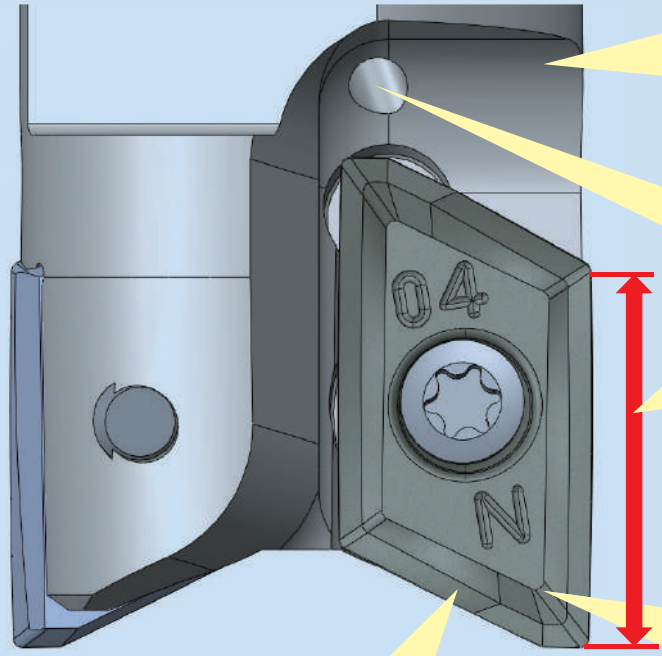
AERO CHIPPER — ALX/MAL Type

High Precision & High Efficient Machining on Aerospace tooling

G-Body

Aerospace Tooling



G-Body

Through coolant hole

High Precision

Combination of high accuracy body and ground insert gives excellent side wall finish.

High Efficiency

Sharp & Unique 3D geometry insert enables high efficiency and low cutting resistance machining. Key in insert gives added security allowing high speed spindle machining.

Multi Function

Capable of ramping & helical interpolation

G-Body

G-Body is a GN surface- hardening treatment on thermal resistant high strength steel giving a hardness over 65HRC and secures insert pocket and holder against thermal deformation improving body durability.

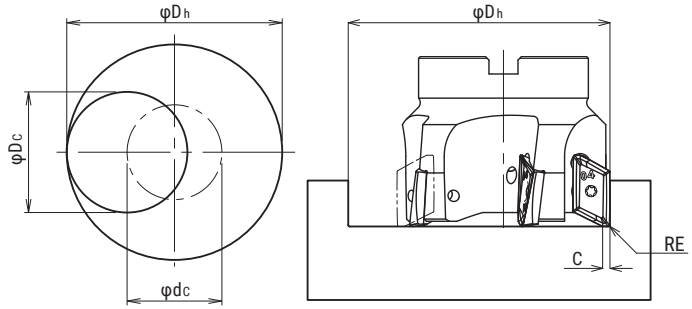
40	5	91	5	91	5	91	8
50	4	114	4	114	4	114	8
63	3	153	3	153	3	153	8

Note
1. In case of ramping , apply 70% or less feed (Vf) from standard cutting condition table.
2. When cutting Titanium/Stainless steel, apply 0.005mm or less (fz) from standard cutting condition table.
3. Wet cutting is recommended.

Helical interpolation



- Calculation of tool pass dia.

$$\varphi dc = \varphi Dh - \varphi Dc$$

Tool pass dia. Bore dia. Tool dia.

- Depth of cut per one circuit should not exceed max. depth of cut Ap
- Down cutting is recommended, tool pass rotation should be counterclockwise

Tool dia. (mm)	Min.bore dia. (mm)	Max. Bore dia. (mm)	Max.Depth of cut (mm)		
φDc	φDh min.	φDh max.	Alminium	Stainless steel	Titanium alloy
20	35.8	38.6	15	9	9
25	45.8	48.6	13	11	11

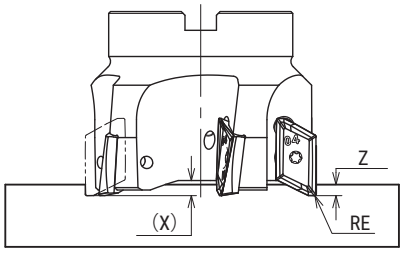
50	96.8	98.6	10	10	10
63	122.8	124.6	10	10	10

Note
1. In case of helical interpolation , apply 70% or less feed (Vf) from standard cutting condition table.
2. When cutting Titanium/Stainless steel, apply 0.005mm or less (fz) from standard cutting condition table.
3. Wet cutting is recommended.

Drilling



Coner radius R (mm)	Max. depth of cut: Z (mm)
RE	Z
R2.5 or below	3
R3 / R3.2	2
R4	1.5

Note
1. Do not combine drilling and ramping together.
2. In case of drilling , apply 50% or less feed (Vf) from standard cutting condition table.
3. Long chips may come out in case of drilling, confirm safe operating conditions.

S-HEAD SMSA Type

■ SMSA Type

Through coolant hole

DV Coating | Face Milling | Shoulder Milling | Copy Milling

Solid Carbide Modular Head with highly repetitive ground screw

- Applicable for General steel, Stainless steel, Heat resistant alloys andt Titanium alloys.
- High accuracy for finishing both side walls and bottom surafaces.
- Coolant through the center of head.
- Available in 6 or 8 flutes.

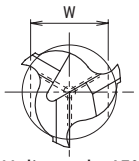
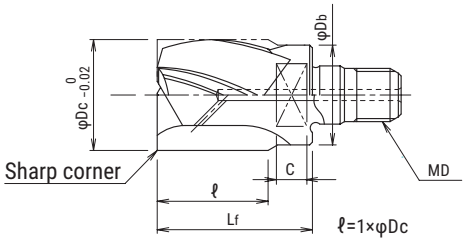
S-HEAD SMAL Type

■ SMAL Type

S-HEAD for Alminium

- Solid carbide modular head with multi-edges for aluminum.
- Positive geometry with 45 degree helix angle & 20 degree rake angle.
- 3 flutes allow excellent chip ejection.
- Through coolant holes prevent material welding.





Cat.No.	Stock	No. of inserts	Dimensions (mm)

Note
1. Use water-soluble coolant.
2. Confirm appropriate gripping length of shank.
3. When ramping, apply 40~70% parameters from standard cutting conditions table.
4. Use rigid and accurate machine as possible.
5. If rpm available is lower than that recommended, reduce the feed rate proportionately.
6. Do not use higher rpm than that recommended.

■ Additional cutting conditions for longer tools

The percentages below should be applied, according to L/Dc.

1. Shoulder milling

~4Dc	0%	0%	-
5~6Dc	25% or below	30% or below	-
7~8Dc	40% or below	50% or below	Over Dc22 is not recommended

2. Slot milling

L / Dc	n (min^{-1})	Vf (mm/min)	ap
~4Dc	0%	0%	0.15Dc or below
5~6Dc	not recommended		
7~8Dc	not recommended		

S-HEAD SMSR Type

■ SMSR Type

Through coolant hole | DH Coating | Corner radius R | Shoulder Milling | Copy Milling | Pocket Milling | Helical Interpolation

Anti-Vibration Solid Carbide Head

- Unequal pitch & irregular helix achieves stable machining.
- Positive geometry and through coolant hole prevent material welding and gives excellent chip evacuation.
- Widely applied from carbon steel, mold steel , stainless steel & Ti-Alloy.

DRILLS

EZ HARD DRLL EZH Type

Feature 1

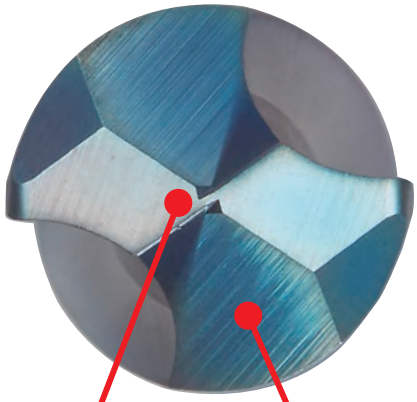
DH1 coating with high fracture toughness carbide substrate delivers stable drilling for high hardened materials up to 70HRC

Feature 2

Increased rigidity

Feature 3

Excellent breaking resistance



Optimized geometry specially for hardened materials

Larger web thickness

	DH1 coating	DV coating	DZ coating
Hardness (Hv)	3,500~3,700	3,300~3,500	2,800~2,900
Oxidization temperature (°C)	1,100~1,200	1,000~1,100	700~800
Coefficient of friction	0.5	0.65	0.6

16	320	30	200	19	160	12

Drilling depth : 3Dc

Note
1. Use water soluble coolant.
2. Not recommended for use on non-heat treated material.
3. Recommended for material over 50 HR to 70 HRc.
4. Use on ridgid machine with a precision holder.
5. Above data recommended for cutting depth of 3XD. Peck drilling is recommended if drilling deeper than 3xD.
6. Recommended for drilling blind hole, if drilling thru hole, use back up material underneath.
7. If using -LS type, reduce above data.

13	725	90	500	40	725	90
14	675	90	450	40	675	90

Note
1. These cutting conditions are for drilling flat surface. For inclined angle under 30°, Apply 40-80% (Vf) from standard cutting conditions. For inclined surface over 30°or more , Apply 20-50%(Vf) from standard cutting conditions.
2. These cutting conditions are for drilling with water soluble coolant. In case of dry cutting, use air to remove the chips.
3. Drilling over 2xDc is not recommended.
4. Side milling is not possible.
5. Use 0.5mm step feed for drilling Heat-resistant alloys.
6. In case of long chips, adjust above conditions by increasing Feed speed (Vf) or using step feed for breaking chips.

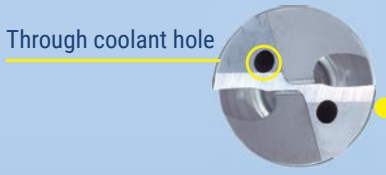
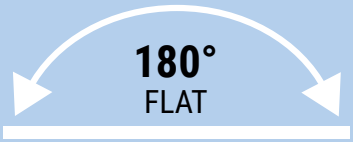
FLAT DRILL — TLD3D/TLD5D Type

Feature 1

High hole accuracy





Feature 2

Capable of a wide range of applications such as spot facing on slope, correction of eccentric holes, and thin plate machining.

Feature 3

Double margin allows high precision straight drilling.

Feature 4

DV coating which has perfect balance between fracture & wear resistance and Smooth treatment on surface of drill ensure excellent tool life.

Feature 5

Applicable for a wide range of work materials; Carbon steel, Tool steel, Mould steel, Stainless steel, Cast iron and Alminium.

Applications

Note
1. These cutting conditions are for drilling flat surface. For inclined angle under 30°, Apply 40-80% (Vf) from standard cutting conditions. For inclined surface over 30°or more , Apply 20-50%(Vf) from standard cutting conditions.
2. Use water-soluble coolant. In case of external coolant , use step feed.
3. Drilling over 3xDc is not recommended.
4. Side milling is not possible.
5. In case of long chips, adjust above conditions by increasing Feed speed (Vf) or using step feed for breaking chips.

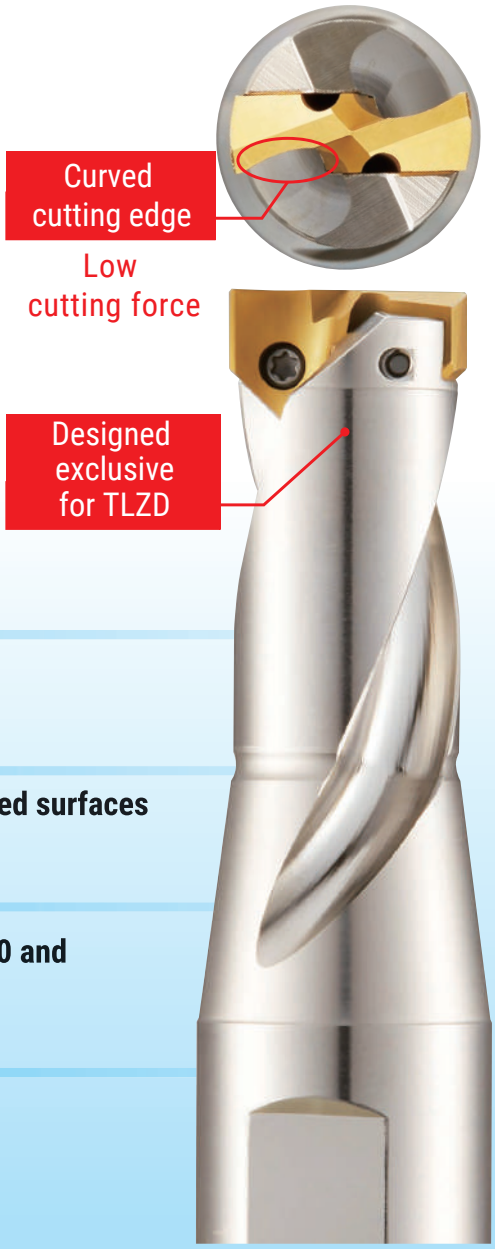
INDEXABLE FLAT DRILL — TLZD Type

Through coolant hole | JC7500 Coating | Spot Facing | Drilling

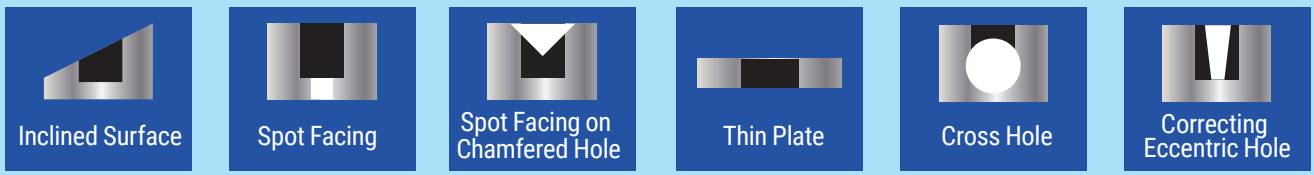
- 180°Flat face
- Able to drill without pilot hole, even on sloped surfaces & cross holes



Features

1. Easy tool management
2. Able to drill without pilot hole, even on sloped surfaces and cross holes.
3. Long tool life by adopting new grade JC7550 and improved coolant distribution system.
4. The most suitable for burr-less processing.

Applications



INDEXABLE FLAT DRILL — TLZD Type

32	700	110	700	110	500	80

Note
1. These cutting conditions are for drilling flat surface. For inclined angle under 30°, Apply 40-80% (Vf) from standard cutting conditions.
   For inclined surface over 30°or more , Apply 20-50%(Vf) from standard cutting conditions.
2. These cutting conditions are for drilling with water soluble coolant. In case of dry cutting, use air to remove the chips.
3. Drilling over 1.5xDc is not recommended.
4. Side milling is not possible.
5. In case of long chips, adjust above conditions by increasing Feed speed (Vf) or using step feed for breaking chips.

32	1,190	80	1,190	190		

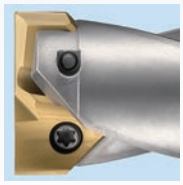
Note
1. These cutting conditions are for drilling flat surface. For inclined angle under 30°, Apply 40-80% (Vf) from standard cutting conditions.
   For inclined surface over 30°or more , Apply 20-50%(Vf) from standard cutting conditions.
2. These cutting conditions are for drilling with water soluble coolant. In case of dry cutting, use air to remove the chips.
3. Drilling over 1.5xDc is not recommended.
4. Side milling is not possible.
5. In case of long chips, adjust above conditions by increasing Feed speed (Vf) or using step feed for breaking chips.
   If cutting stainless steel, not recommended to increase Feed speed for breaking chips.
   Increase cutting speed (Vc) and reduce Feed speed (Vf) so that bellows-shaped chips can occur.

INDEXABLE FLAT DRILL — TLZD Type

PROCEDURE FOR MOUNTING INSERT

1. Removing used insert

Make sure to remove any chips or dust off the tip before removing the used insert. Remove used insert and clean pocket using a brush or air blowing before loading new insert.



2. Loading new insert

Place new insert in pocket, lightly tighten two screws while pressing the top of the insert (see photo). After confirming there is no gap between the drill and insert, tighten the insert screw, starting with the same screw you first lightly tightened, to the recommended torque while still pressing the top pf the insert.

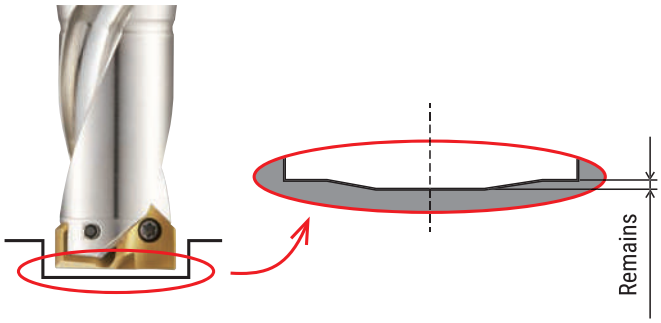
"MOLY"
(Sold separately)

⚠ Note:

Clamp screw needs to be changed out after replacing the insert approximately 10 times or if you see any issues with the screws.

Clamp screw

■ HOLE BOTTOM SHAPE



Tool dia. (mm)	Remains (mm)
φ14～φ20.5	0.04～0.06
φ21～φ26.5	0.05～0.07
φ27～φ32.0	0.06～0.08

Note
1. These cutting conditions are for drilling flat surface. For inclined angle under 30°, Apply 40-80% (Vf) from standard cutting conditions.
For inclined surface over 30°or more , Apply 20-50%(Vf) from standard cutting conditions.
2. These cutting conditions are for drilling with water soluble coolant. In case of dry cutting, use air to remove the chips.
3. Drilling over 1.0xDc is not recommended.
4. Side milling is not possible.
5. In case of long chips, adjust above conditions by increasing Feed speed (Vf) or using step feed for breaking chips.
If cutting stainless steel, not recommended to increase Feed speed for breaking chips.
Increase cutting speed (Vc) and reduce Feed speed (Vf) so that bellows-shaped chips can occur.

INDEXABLE DRILL TEZD Type

EASY ASSEMBLY AND HIGH PERFORMANCE

Through coolant hole | DV Coating | JC7500 Coating | Drilling

ECO-FRIENDLY Unique low cutting geometry reduces power consumption.

ECONOMICAL Save tool cost compared with using solid carbide drill

HIGH CUTTING PERFORMACE Distinctive cooling system ensures coolant is supplied to cutting edge.

■ LINE UP

Holder	Depth of hole	Diameter
TEZD-MS Type	3×Dc	φ13.5～φ32.5
TEZD-ML Type	5×Dc	
TEZD-XL Type	8×Dc	

INDEXABLE DRILL — TEZD Type

PROCEDURE FOR MOUNTING INSERT

1. Removing used insert

Make sure to remove any chips or dust off the tip before removing the used insert. Remove used insert and clean pocket using a brush or air blowing before loading new insert.

2. Loading new insert

Place new insert in pocket, lightly tighten two screws while pressing the top of the insert(see photo). After confirming there is no gap between the drill and insert, tighten the insert screw, starting with the same screw you first lightly tightened, to the recommended torque while still pressing the top pf the insert.

"MOLY"
(Sold separately)

⚠ Note:

Clamp screw need to be changed out after replacing the insert approximately 10 times or if you see any issues with the screws.

Clamp screw

IF USING LATHE MACHINE

1. Check run out of insert O.D. within 0.03mm (off set of center 0.015mm) and flute O.D. of shank side within approx. 0.03mm.
2. Due to large thrust of cutting forces, make sure drill is fully seated in holder.
3. Reduce the cutting speed and feed rate by 20% from standard cutting conditions.

SOLID CARBIDE ENDMILLS

ONE-CUT 70 SEH Type

One-Cut 70
UP TO 70HRC

Feature 1

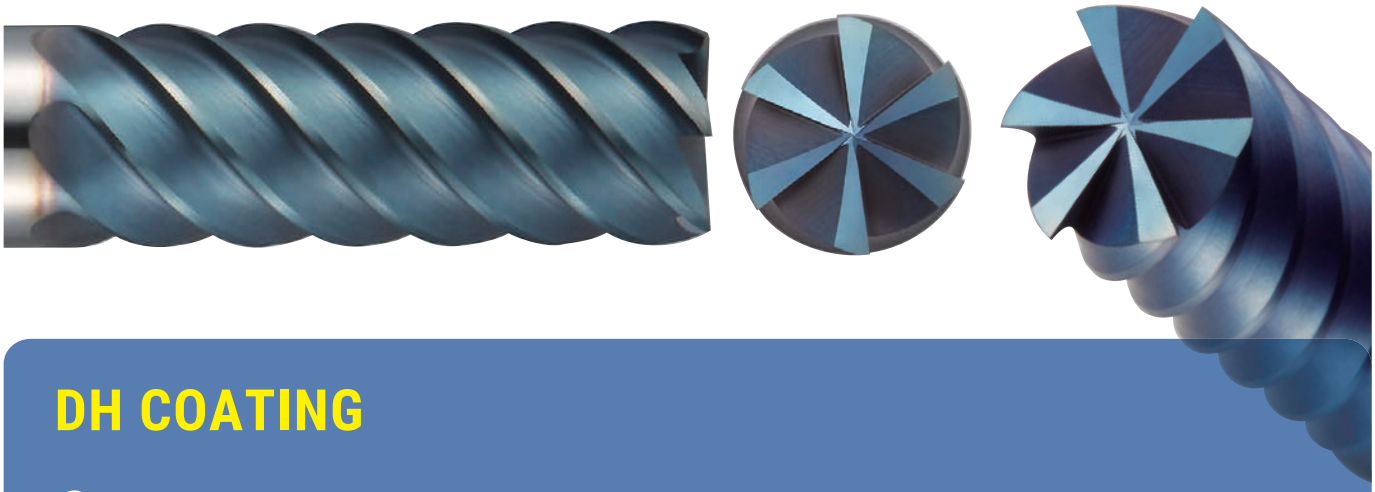
High Speed & High Efficiency Machining on High Hardened Materials.

Feature 2

High Precision Machining from Semi-finishing to Finishing.

Feature 3

Outstanding tool life with combination of newly developed DH coating & Super-micro grain carbide

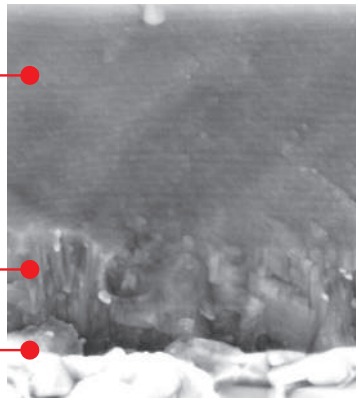


DH COATING

● Properties of DIJET PVD coating

	DH coating	DV coating	DZ coating (TiAlN)
Hardness (Hv)	3,500~3,700	3,300~3,500	2,800~2,900
Oxidation temperature (℃)	1,100~1,200	1,000~1,100	700~800
Coefficient of friction	0.5	0.65	0.6

- Greatly improved for higher hardness and heat resistance.
- Super multi layer coating that has high thermal shock resistance suppress sudden chipping.
- Achieves excellent tool life from semi-finishing to finishing.



ONE-CUT 70 SEH Type

- For High hardened materials up to 70HRC
- Helix angle 50°

3. Recommend to down cut with air blow or mist coolant.

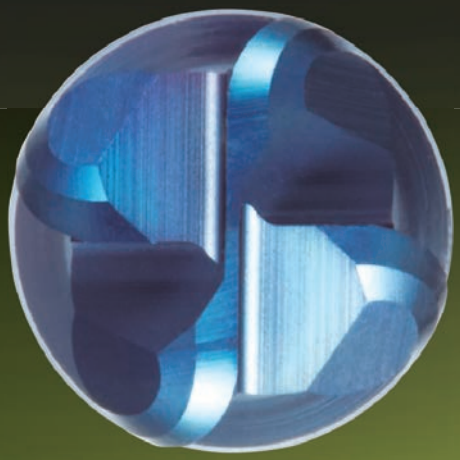
HARD 1 RADIUS — SFSR Type

HARD 1 RADIUS



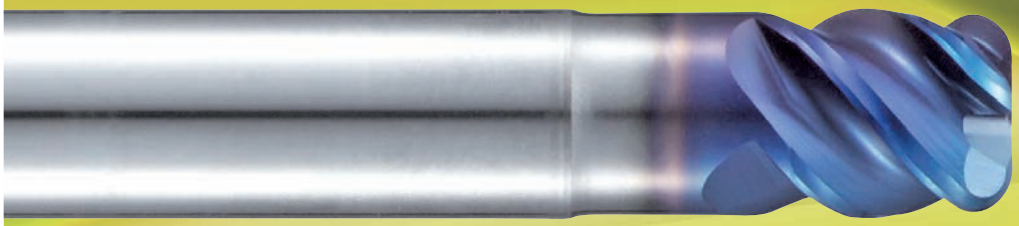
Feature 1
Highly Rigid Design for High Efficiency Machining

Feature 2
Suppress Vibration with Variable Helix Angle &
Unequal Spacing Teeth Geometry

Feature 3
Special design on center of cutting edge
improves cutting perfomance

Feature 4
Applicable for High Spindle Machine & Shrink Fit Holder
Shank diameter tolerance: h5

Feature 5
Excellent tool life for Hardened Materials with
Newly developed grade"DH110"



New PVD coating <DH coating>

● Properties of DIJET PVD coating

	DH coating	DV coating	DZ coating(TiAlN)
Hardness(Hv)	3,500～3,700	3,300～3,500	2,800～2,900
Oxidation temperature (℃)	1,100～1,200	1,000～1,100	700～800
Coefficient of friction	0.5	0.65	0.6

HARD 1 RADIUS — SFSR Type

- For General steel to Hardened steel
- From roughing to finishing
- Helix angle 50°-52°

12	2,800	1,000	1,800	700	1,500	530

Note
1. These cutting conditions are for general guidance.
2. The figures should be adjusted according to machining shape, purpose and rigidity of machine and work clamping.
3. If rpm available is lower than that recommended, reduce the feed rate proportionately.
4. Recommend to down cut with air blow or mist coolant.
5. Wet cutting is recommended for stainless steel.
6. Recommended ramping angle is up to 45°for cutting general steel.
   In case of Stainless steel & Hardened steel, recommended ramping angle is up tp 5°only.

HARD 1 BALL — SFSB Type

HARD 1 BALL

Feature 1

Newly developed short length type
solid carbide ball nose endmill that has
high tool rigidity for stability and reliability.

Feature 2

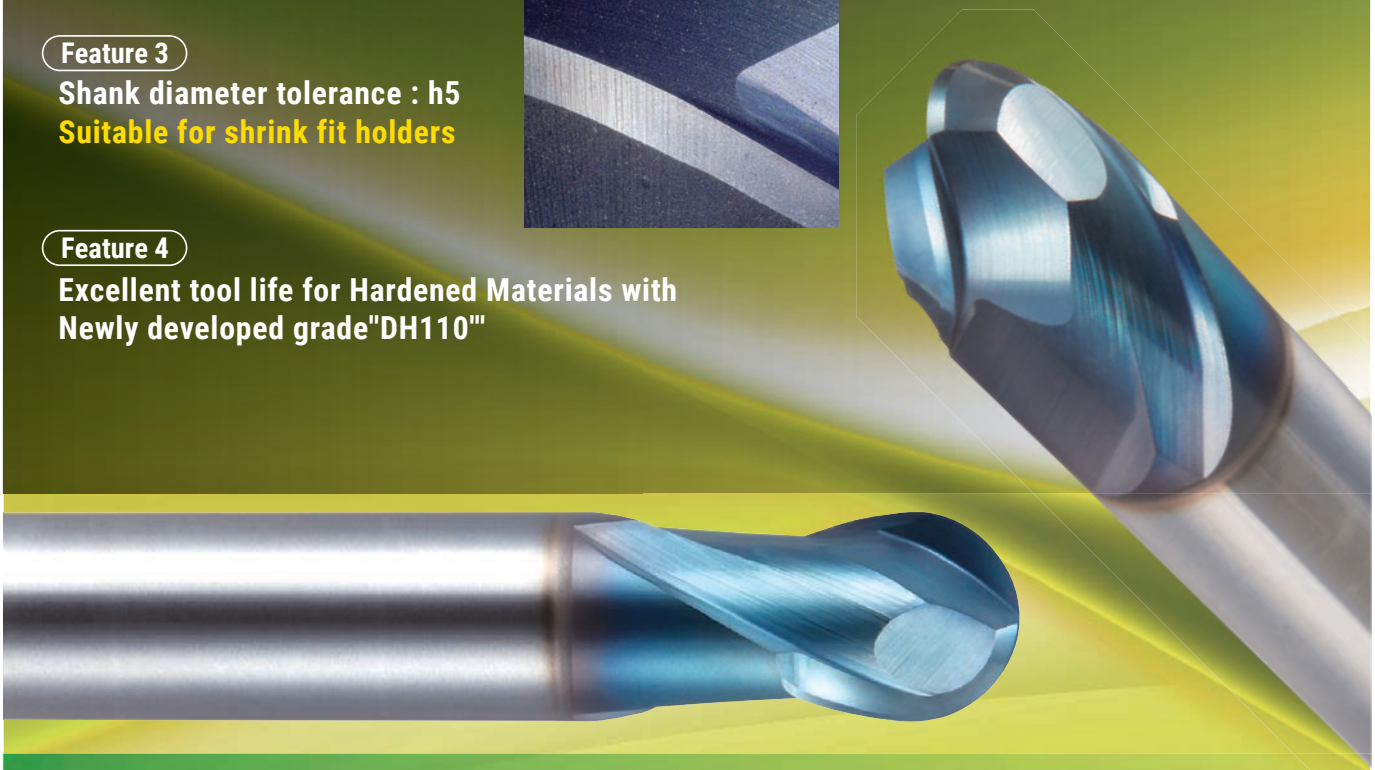
Secure Radius Accuracy : ±0.005mm
For better surface finish,
improving chipping resistance during machining

Feature 3

Shank diameter tolerance : h5
Suitable for shrink fit holders

Feature 4

Excellent tool life for Hardened Materials with
Newly developed grade"DH110"'



New PVD coating <DH coating>

ONE CUT BALL 70 — DH-OCHB Type

One-Cut Ball 70

UP TO 70HRC

4-flute high-efficiency carbide ball nose end mill

DH-OCHB Type

Anti-vibration with High rigidity & Unequal Spacing Teeth Geometry

Helix angle 45°, Low cutting force / High cutting performance

Excellent tool life for Hardened Materials with Newly developed "DH coating"

Special edge geometry in center enables smooth chip ejection and control clogging of chips, allows stable machining.

Type of machining	 ap≦Dc		 ap≦Dc		 ap≦0.3Dc	
φDc (mm)	n (min-1)	Vf (mm/min)	n (min-1)	Vf (mm/min)	n (min-1)	Vf (mm/min)
3	8,500	540	8,500	540	3,200	160
4	6,400	580	6,400	580	2,400	170
5	5,100	600	5,100	600	1,900	175
6	4,200	600	4,200	600	1,600	180
8	3,200	640	3,200	640	1,200	190
10	2,500	630	2,500	630	950	190
12	2,100	630	2,100	630	800	160
16	1,600	480	1,600	480	600	120
20	1,300	390	1,300	390	480	100

Note
1. These cutting conditions are for general guidance.
2. The figures should be adjusted according to machining shape, purpose and rigidity of machine and work clamping.
3. Wet cutting is recommended . For heat resistant alloy , use of cutting fluid is more effective. .
